

Install

Download A4400_PC_Demo.zip file from Adash website and extract it into your working folder (e.g. C:\).

Start

Open folder C:\A4400_verXXXX_demo\Bin and run VA4.exe to start demo application. A launcher screen appears like in real instrument.

Using

In the A4400_PC_Demo you can use all functions as in real instrument. See the A4400 manual for details. Use mouse to click buttons instead of keys in real instrument (texts can be written from keyboard). You cannot use the PC_demo for live signals measuring, but you can use records (see A4400 manual to learn how to use A4400 recorder).

Termination

In launcher screen, press F10 + Esc + F9 to terminate demo application (keep the sequence of keys).
